## Abstract

### Complete this section for D4.

The *Abstract* should be at most 150 words long, and should summarize briefly what your project is about. This includes the motivation for the problem (2-3 sentences), the problem you tackled (2-3 sentences), and your main results (1-2 sentences).

## Introduction

The *Introduction* section (~1 page) describes the background and motivation behind your work, and provides an overview of the work and the findings. It should include the following content.

- **Complete this part for D1.**

Motivate your entire paper. At a high level, describe the problem that your project is addressing. Why is this an important problem to tackle? If there a solution to this problem, what are some potential real-world impacts of this solution? Try to give a compelling motivating story. If possible, support your argument with evidence such as facts and statistics. (2-3 paragraphs)

- **For D1, describe the problem and your methodologies only. Then, complete this part for D4.**

Describe, at a high-level, the problem you tackled and your main results. What research questions are you trying to answer? What methodologies did you used to answer the question? What are the performance measures that you used to evaluate the methodologies? Describe your key findings in 2-3 sentences. (2-3 paragraphs)

- **Complete this bullet point for D4.**

Emphasize your contributions. How should we interpret the results? Why should people care about this work? Does this project introduce any novel techniques or reveal any unexpected findings? In bullet point forms, list 3-4 key contributions of your project.

## Related Work

### Complete this section for D1.

Copyright © 2020, Association for the Advancement of Artificial Intelligence (www.aaai.org). All rights reserved.

The *Related Work* section (~1 page) summarizes prior work for addressing the same problem or similar problems. In this section, you should aim to survey at least 5-7 papers. Whenever possible, synthesize the literature by describing multiple papers in aggregate, i.e., mentioning a common technique that multiple prior work used. Try to connect the prior work into a coherent story. Imagine that you are describing a story to someone about how researchers have used different techniques over time to solve the same or similar problems. Please use BibTeX to do citations. Here are some examples (Shalev-Shwartz and Ben-David 2014; Block 1962; Novikoff 1962).

## Methodology

### Complete this section for D2.

The *Methodology* section (~2 pages) describes the algorithms that you chose to implement. Describe in details how each algorithm works. Include their mathematical formulations, if necessary. Include pseudo-code, if necessary. If you had to extend an existing algorithm in order for it to work with the problem, describe in details what is different/new. Provide a rationale for why you selected these particular algorithms and how they are appropriate for the problem. You should provide enough details so that someone can reproduce the steps and replicate your results.

If you are tackling a machine learning problem, you may be using an existing data set or creating a new data set. In this case, you should describe the data-set that you are analyzing as well as any data filtering and merging procedures that you used to prepare/create your data-set. Your description should include the size of the data-set(s) (i.e., number of examples), whether the class labels are balanced/imbalanced, the meaning of the features, and other unique characteristics of the data-sets. Explain why the data-sets are appropriate for your problem and what are their limitations. Include the URL of the websites from which you downloaded the data-set(s).

You should also describe any pre-processing steps you took to prepare or create the final data-set that you used to train and test the algorithms. Examples of pre-processing steps include procedures for joining multiple data-sets, filtering out certain examples, scaling features, etc. Provide the rationale for why you are using these data preparation procedures, with enough details so that someone can repro-

duce the steps and replicate your results. For example, if you chose to re-scale certain features, explain how the re-scaling was done and why.

## Results

### Complete this section for D2 and D3.

The *Results* section (~2 pages) describes how you evaluated the algorithms and reports the findings.

#### Complete the following two paragraphs for D2.

Describe the measures that you used to evaluate the algorithms. Be as precise as possible by including their mathematical formulations. Provide a rationale for why these performance metrics are appropriate for your problem.

Describe other details about your experimental design. If you are tackling a machine learning problem, include details such as how you created the training, validation and test set, how you selected the model's hyper-parameters, etc.

#### Complete the following two paragraphs for D3.

Describe the findings from your evaluation. Describe both (a) how well your techniques worked, and (b) what you learned about the problem through these techniques.

Prepare figures (e.g., Figure 2) and tables (e.g., Table 1) to describe your results clearly. Make sure to label your figures and tables and explain them in the text. If you are comparing the performance of algorithms, include statistical tests to assess whether the differences are statistically significant. If possible, describe how your techniques compare to prior work.

Techniques	F-1 Score
Baseline	0.80
Another Baseline	0.76
My Awesome Algorithm	<b>0.95</b>

Table 1: example of a table summarizing the results

## Discussion

### Complete this section for D4.

The *Discussion* section (~1 pages) describes (a) the implications of your results, and (b) the impact and the limitations of your approach.

For the results, describe how a reader should interpret them. Try to form concise take-away messages for the reader. For your approach, describe the extent to which your approach helps to solve the problem. Describe any limitations of your approach. If possible, compare your results and your approach to that of prior work.

## Conclusion

### Complete this section for D4.

The *Conclusion* section (~0.5 pages) provides a brief summary of the entire paper. In this section, describe

- the motivation, the problem, and your results, and
- 3-4 promising future directions.
